

The Next Phase in Gold's Seasonality

Once again gold is entering an important seasonal juncture. In the best of years gold picked up momentum coming out of August (1977, '78, '79, '80, '82, '86, '01, '02, '03, '04, '05, '07, '09, '10 & '12). The rallies generally took prices higher into October and occasionally beyond.

Every instance since 1975 that September exceeded the high of the last *complete* week of August (i.e. last week; Aug 21st-25th) it needed to hold that week's low. **Any breakout that reversed through that support went on to make lower lows** (2000, 2006, 2011 & 2016). Last year is a prime example. Prices made new highs on the week of September 9th, violated the \$1321 low on September 13th and then dropped to \$1125 by December.

Although prices are through the resistance line from the all-time high, any movement through last week's high means that it is time for traders to place tight stops below last Friday's low.

Opinions in this report are solely those of the author. The information herein was obtained from various sources; however, we do not guarantee its accuracy or completeness. This research report is prepared for general circulation and is circulated for general information only. It does not have regard to the specific investment objectives, financial situation, and the needs regarding the appropriateness of investing in any securities or investment strategies discussed or recommended in this report and should understand that statements regarding future prospects may not be realized.

Investors should note that income from such securities, if any, may fluctuate and that each security's price or value may rise or fall. Accordingly, investors may receive back less than originally invested. Past performance is not necessarily a guide to future performance. Neither the information nor any opinion expressed constitutes an offer to buy or sell any securities or options or futures contracts. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related investment mentioned in this report. In addition, investors in securities such as ADRs, whose values are influenced by the currency of the underlying security, effectively assume currency risk. Moreover, from time to time, members of the Institutional Advisors team may be long or short positions discussed in our publications.
