

Gold** Weekly and Daily Continuation

Rolled to Feb. Support 1830-1850. Resistance near term a close above 1910. We are illustrating a unique pattern where two equal swings in time (47-sessions) each sub-divide in respective Fibonacci golden sections. These are not too common and usually represent the **completion of a pattern**. *The pattern we would suggest is the Aug/Dec correction.* Anyone looking at gold right here is probably fixated on the down trendline from August. A close above, particularly weekly, would be a strong confirmation the correction has run its course. The illustrated pattern we believe is supportive of that conclusion. We'll wait for prices to confirm.
